

# FACT SHEET

## Pacific Connector Gas Pipeline

February 1, 2007

- The Pacific Connector Gas Pipeline (Pacific Connector) is being jointly developed by subsidiaries of Williams, PG&E Corporation, and Fort Chicago Energy Partners L.P. with each party holding a one-third interest.
- The Pacific Connector is a proposed 231-mile natural gas transmission line that would connect the proposed Jordan Cove LNG terminal being developed by Jordan Cove Energy Project L.P. near Coos Bay, Oregon, to the Williams' Northwest pipeline system near Roseburg, Oregon, and to Pacific Gas and Electric Company's gas transmission system near Malin, Oregon. Other interconnections include Avista Corp., Tuscarora Gas Transmission and Gas Transmission Northwest.
- The Pacific Connector would be capable of delivering 1 billion cubic feet of natural gas per day to west coast natural gas markets.

- The Pacific Connector will be operated by Williams.
- The Pacific Connector will be regulated by the Federal Energy Regulatory Commission (FERC). On May 1, 2006, FERC approved Pacific Connector's request to start the National Environmental Policy Act (NEPA) pre-filing process. Environmental reviews and public participation will be part of the NEPA pre-filing process. The full application is scheduled to be submitted to FERC in April 2007. Upon obtaining required Federal and State approvals, construction is scheduled to commence in the summer of 2009 with commercial operation of the pipeline anticipated in the fourth quarter 2011.
