## Northwest Connection - November 2022

---

### Happy Holidays from Northwest Pipeline!

The winter holidays are upon us once again and as we reflect on another successful year, we want to thank you for your continued trust and support as we could not have done it without you! This year has had its challenges, but every obstacle was overcome through hard work, a commitment to be the best in our space, and having the best customer relationships in the industry. We are proud of what we have been able to achieve together in 2023, including, hitting a record throughput of 65.48 BCF in September, negotiating a rate case settlement that includes a modernization and emissions reduction program, and working collaboratively with our customers to help solve your natural gas transportation and storage needs throughout the year and for years to come.

As we approach the end of the year, we would like to wish you and your families a very Happy Holiday season and thank you for your business, your continued support and most importantly, your friendship. This has been a wonderful year and we look forward to continued success in 2023!

### Wyoming Hydrogen Hub gaining momentum

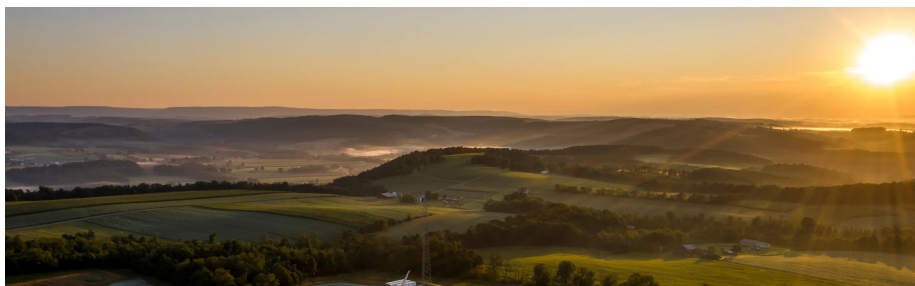

With the slightest hint of winter in the air, representatives from industry, academia and government came together in Sweetwater County, Wyoming on a recent September afternoon to commemorate the state's long history in U.S. energy production and the leading role it is taking in the next generation of energy, including scaling up and commercializing the use of clean hydrogen.

## 2021 Sustainability Report: Williams will be there

Williams is making good on its promise to safely and reliably meet today's natural gas needs, while investing in the next generation of energy solutions, as outlined in the company's 2021 Sustainability Report. Demand for clean energy is on the rise and natural gas is playing a critical role in moving the world to a low-carbon future.

"As one of the nation's leading energy infrastructure providers, we are committed to leveraging our large-scale natural gas infrastructure for the benefit of tomorrow and generations to come," said President and CEO Alan Armstrong.

## Williams is ready to serve the energy needs of the future

Our energy challenge is complex. We need to meet increasing energy demand, while decreasing our carbon footprint and enhancing reliability – both here at home and globally.

Complex challenges require innovative solutions. Solutions that don't sacrifice reliability or affordability. Solutions that merge technology advancements with reliable

infrastructure. Solutions that utilize existing assets and resources to meet ever growing demand.

At Williams, we remain committed to delivering these demands with a natural gas focused strategy that we developed years ago when others felt it was out of favor. Since doubling down on our vision for a clean energy future, this strategy has positioned us for a very bright future.

## Permitting reform must be comprehensive, Williams CEO tells Bloomberg

Alix Steel at Bloomberg News interviewed Williams President and CEO Alan Armstrong this week about why the lack of energy infrastructure in the U.S. is hurting consumers, despite America's abundant natural gas supply. The key to solving this issue, Armstrong said, is a reformed permitting process to expand infrastructure and meet clean energy demand.

"Really getting it done such that we can move ahead with very effectively building out the infrastructure in the U.S. – both for the sake of natural gas pipelines and renewables – we've got a lot of changes that need to be made and it's a very complex issue," he said. "I don't think that there will be support for anything that is not comprehensive and detailed enough to make it happen."
